WEEK 6 MONDAY 9/25 MAKEUP ASSIGNMENT

Introduction:

You will use CSS FlexBox to create a navigation bar with logo.

As part of your required code for your Project #1 - local business or product website, you will need to incorporate CSS FlexBox. One potential use for FlexBox is for orienting navigation items in a navbar, including a centered logo.

The CodePen at this link shows some navigation items that need to be oriented horizontally and centered using FlexBox:

<https://codepen.io/dynowright/pen/WZREBw>

Your assignment is to “fork” this CodePen (the button is on the top right menu of CodePen), which creates a new link which you can edit, and then using the CSS FlexBox guide at CSS Tricks:

<https://css-tricks.com/snippets/css/a-guide-to-flexbox/> and the EDpuzzle video for this week, etc., add the necessary code to the CSS of the CodePen to orient the links in the navbar properly.

This is what the finished product should look like:

For your grade in lieu of tonight’s in-class activity, send me the CodePen link with your finished navbar. This is due at 6:30pm next Monday 10/2.
